

Maul Technology

A Division of VHC Ltd.

High Performance Blank Mould Supporting Assembly for 5" EF Machines

Features :

- All existing Maul Technology machines can be converted.
- Easy to install.
- Positive reinforcement of mould shafts and support.

Benefits :

- Eliminates blank mould shaft deflection.
- Extends blank mould and neckring life.
- Accommodates increased clamping force.

A high performance **Blank Mould Supporting Assembly** from Maul Technology, manufactured from a robust, well proven casting and fitted with an anti-deflection assembly.

The anti-deflection system connects the two mould opening and closing shafts with the mould holder pin and the bracket structure. This system improves production, reduces checks and splits in the finish and reduces wear on the blank moulds and neckrings.

The assembly can accommodate regular and shear mould holders.
