Constant Cushion Invert Mechanism

Maul Technology manufactures a complete range of Constant Cushion Invert Mechanisms to suit all IS. machine sizes

This rugged well proven mechanism is fitted with 'Kiss Plate' type connections for all operating air and oil connections between the mechanism and section frame providing easy maintenance and removal

A sturdy cylinder head avoids deflection of the piston rod when in contact with the neckring mechanism

Cushion oil, provided by an independent oil system is manufactured at a constant level and pressure which provides smooth, repeatable deceleration at the end of each stroke
